

Metropolitan Area Income in 1971

THE Bureau of Economic Analysis annual series on personal income for the Nation's 254 SMSA's are presented here extended through 1971, and cast in a revised format.

The income estimates for 1967 through 1970 incorporate new and revised data from both governmental and private sources. The most important of these are revised wage data from the State Bureaus of Employment Security, Internal Revenue Service data on dividends and interest, new Census information on local government payrolls, updated intra-State breakdowns of medicare payments, new county totals for wages of employees of railroads, hospitals, and nonprofit institutions, and 1970 Census data on inter-county commuting from home to work.

Personal income defined

Personal income is the current income of residents of an area from all sources. It is measured before deduction of income and other personal taxes, but after deduction of personal contributions to social security, government retirement, and other social insurance programs. It consists of wages and salaries (in cash and in kind, and including tips and bonuses), various types of supplementary earnings termed "other labor income" (the largest item of which is employer contributions to private pension and welfare funds), net income of owners of unincorporated businesses (farm and nonfarm, including the income of independent professionals), property income (net rental income and royalties, dividends, and interest), and government and business transfer payments (consisting of disbursements to persons for which no services are rendered currently, such as unemployment benefits, social security

payments, and welfare and relief payments).

To measure personal income on a local area basis, criteria must be established for allocating income to each area. In the case of labor and entrepreneurial income, called earnings in the aggregate, appropriate criteria are the income recipient's place of work or place of residence. The difference between the two is the net flow of commuters' earnings. Tables 1-284 show the sum of wages and salaries, proprietors income, and other labor income earned in each SMSA by major industry division. These place of work data are especially useful when the major interest is in the economy of the area rather than in the economic status of its residents. The earnings data are also useful in assessing the economic impacts of potential policies, programs, and projects.

In the case of personal property income and transfer payments, the distinction between place of work and place of residence cannot be applied. For these two income components, residence is the only applicable principle of classification.¹ Accordingly, total personal income can be measured meaningfully on a residence basis only. This is done in table A. In that table, total earnings, after being converted to a place of residence basis and netted of personal contributions to social insurance, have been added to property income and transfer payments to yield the estimated total personal income received by residents of each SMSA.

¹ In the case of property income, an alternative criterion resembling the place of work criterion would be possible, e.g., allocation to the areas in which the businesses that generate the income are located. However, substantial conceptual and statistical difficulties stand in the way of the application of this criterion.

Division of residence-based total personal income by total population yields per capita personal income, also shown in table A.²

The residence adjustment factors used to convert the place of work components of income to a place of residence basis have been updated to incorporate the journey-to-work statistics from the 1970 Census of Population. The residence adjustment factors have been revised back to 1959 to yield more accurate residence-based estimates of total and per capita personal income for the years 1959, 1962, and 1965 through 1970.

Total and per capita income on a residence basis are especially useful for analyzing the economic status of the residents of an area. They also serve as measures or indicators of the consumer market.

Comparison with national totals

With the exception of 1965 and 1966, the SMSA estimates shown in this report are consistent with revised totals as published in the national income and product accounts and in the State personal income series. The U.S. totals in the accompanying tables differ from those in the national income and product accounts in that the SMSA series exclude the wages and salaries

² County population estimates used to derive the per capita personal income totals shown in table A for 1971 are, for the most part, preliminary. Official population estimates as published by the Bureau of the Census in Series P-25 Population Reports were used for New Hampshire, Vermont, Rhode Island, New Jersey, Delaware, Indiana, South Dakota, Louisiana, Arizona, Montana, Idaho, Colorado, and Utah. In 27 other States, the county population estimates are provisional totals prepared by the States and adjusted by BEA to the July 1, 1971 State population estimates made by the Bureau of the Census. For the remaining 11 States, the Census Bureau's July 1, 1971 State totals were distributed by the 1970 Census estimates of county population. Official Bureau of the Census county estimates for the States cooperating in the Federal-State Cooperative Program for Population Estimates should be available by July 1, 1973.

received by Federal civilian and military employees temporarily stationed abroad.

Geographic classification

On April 27, 1972, the Office of Management and Budget issued substantive amendments and additions to the official list of standard metropolitan statistical areas. Four new SMSA's were established, 12 SMSA's were combined into 6, and 125 counties were added to 72 existing SMSA's. Additional changes were made in New England, where SMSA's are defined in terms of cities and towns, and in the Puerto Rican SMSA's. The Office of

Management and Budget has also changed the titles of 14 SMSA's. Within the next several months, BEA's regional economics information system will be modified to reflect the new definitions of the composition of SMSA's. Meanwhile, the classification of SMSA's used in this report accords with the official definitions of the Office of Management and Budget as of November 1972 with the following exceptions.

In New England, SMSA's are defined officially in terms of cities and towns instead of counties. Because satisfactory data for measuring SMSA income are generally available on a

county basis only, the New England SMSA's have been redefined by BEA to conform to county boundaries. This reduced the number of SMSA's in New England from 23 to 14. In Vermont and Wyoming—States without official SMSA's—Burlington and Cheyenne, respectively, are treated as SMSA's. Because the U.S. national income accounts do not cover territories and possessions, the four SMSA's in Puerto Rico are omitted from the series.

Boundaries of SMSA's are changed from time to time. For this SMSA income series, however, the designated geographic boundaries of each SMSA

Table A.—Total Personal Income, Selected Components of Personal Income, and Per

are held constant over the entire period back to 1929.

Availability of unpublished data

The Bureau of Economic Analysis has established the initial components of a comprehensive regional economics information system which contains a large amount of local area income and employment data not shown in this report. Currently, the major components of this system consist of measures of personal income and employment by type and by industry for each metropolitan area and nonmetropolitan county in the Nation.

In the past, BEA has furnished these unpublished data to the public on a cost basis. However, the Congress, in response to an expressed need for local area income and employment data, has now provided funds for distributing these data to one or more central locations in each State at no charge. This distribution is underway. Generally, the data are being sent to the Bureau of Business and Economic Research of one or more major State universities in each State and to the economic development or planning agency of the State government. A list of the State agencies and universities

to which these data have been offered is shown on page 44. If a user is unable to obtain the data from the appropriate agency in his State, a request for the information should be made directly to the Regional Economics Division, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230.

Note.—The SMSA estimates were prepared by Wallace Bailey, Jr., Kenneth Borkman, Michael Carroll, Vivian Conklin, Q. Francis Dallavalle, Virginia Davis, Lillian Hasen, Kenneth Horowitz, Raymond Leach, Gordon Lester, Alan Milligan, Elizabeth Queen, William Reid, Jr., Victor Sahadashny, and Susan Schmid under the direction of Edwin J. Coleman.
